

The background of the image is a photograph of a massive forest fire at night. The sky is dark, and the ground is obscured by thick, billowing orange and yellow smoke. In the distance, a long line of intense fire and bright orange flames cuts through the trees. The overall atmosphere is one of a major environmental emergency.

# อัตราการเสียชีวิตมะเร็งปอด VS สัดส่วนการสูบบุหรี่ของไทย

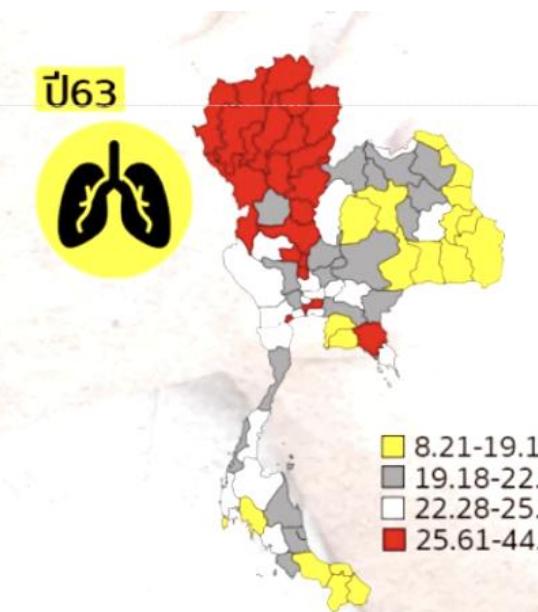

การสูบบุหรี่ลดลง 1 ใน 4 เมื่อเทียบกับ 18 ปีก่อน คนอายุ 25-59 ปี สูบบุหรี่มากที่สุด  
คนใต้สูบบุหรี่มากกว่าภาคอื่น  
ภาคเหนือสูบต่ำสุดแต่อัตราเสียชีวิตจากมะเร็งปอดสูงสุด

SPRING

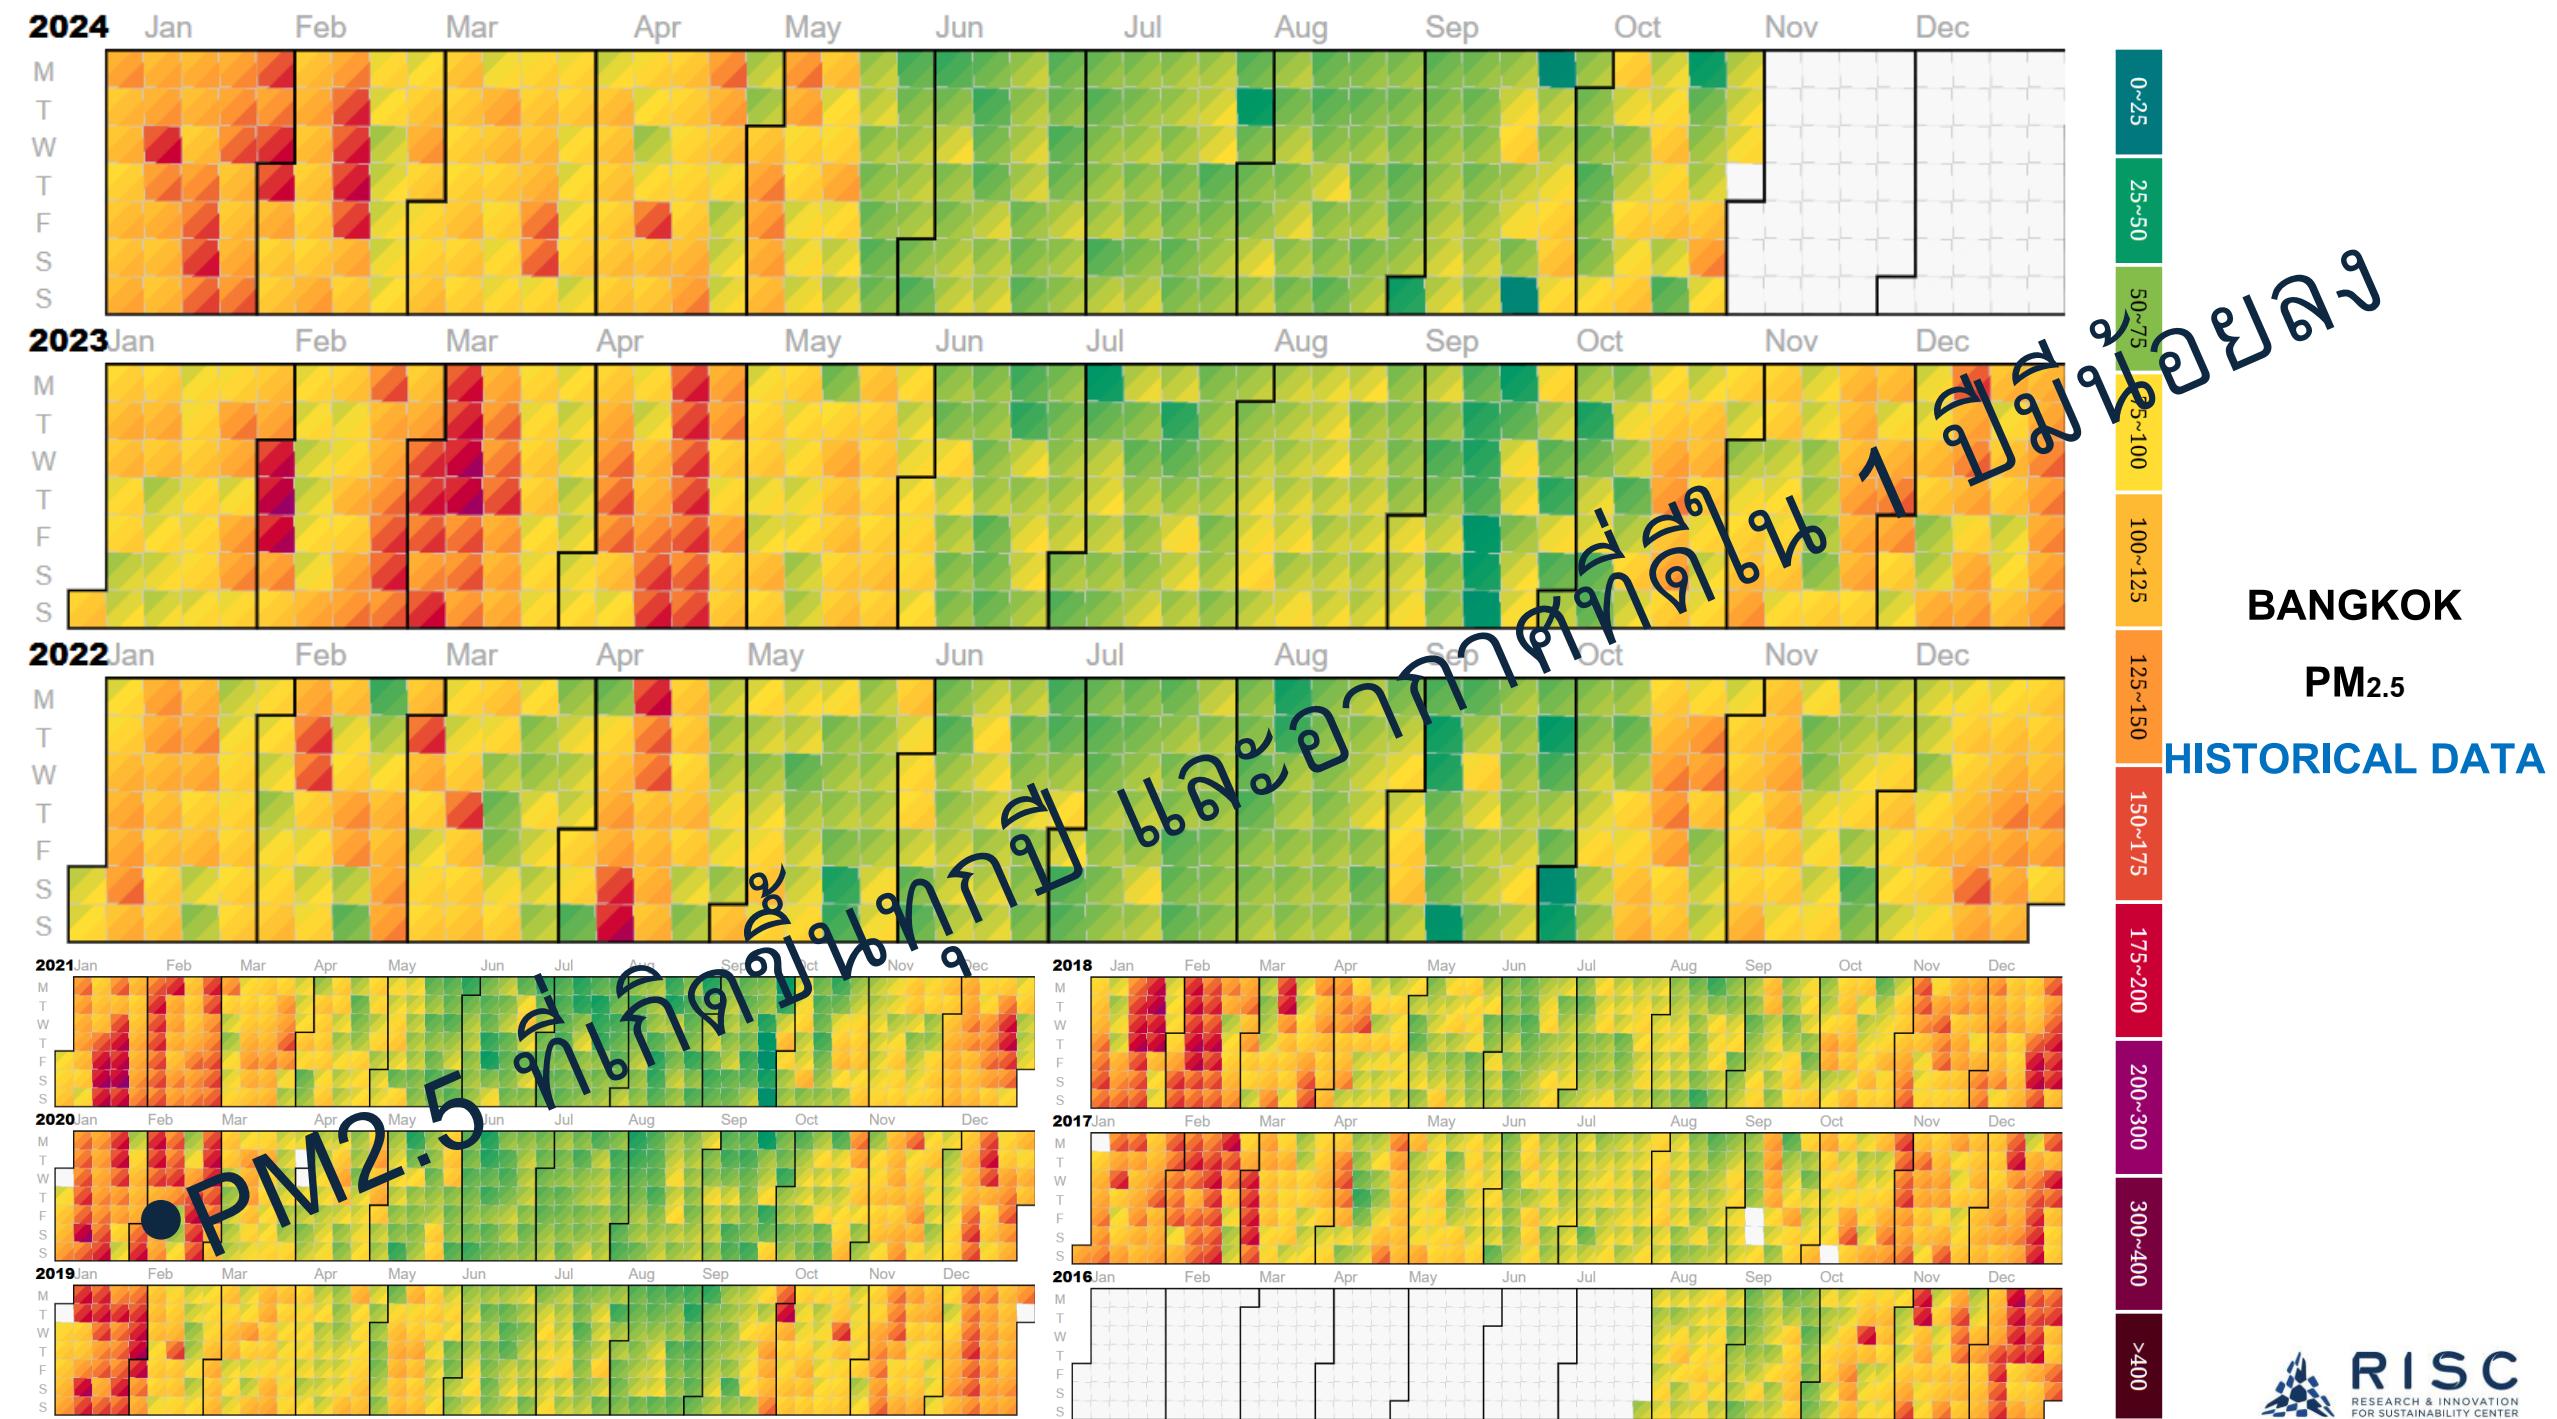

↓

จังหวัดที่สูบบุหรี่ต่ำที่สุด 5 อันดับ	ค่า (%)
สมุทรสงคราม	13.2
อุดรติดก๊อก	13.2
เชียงราย	12.6
ลำปาง	12.4
น่าน	11.1

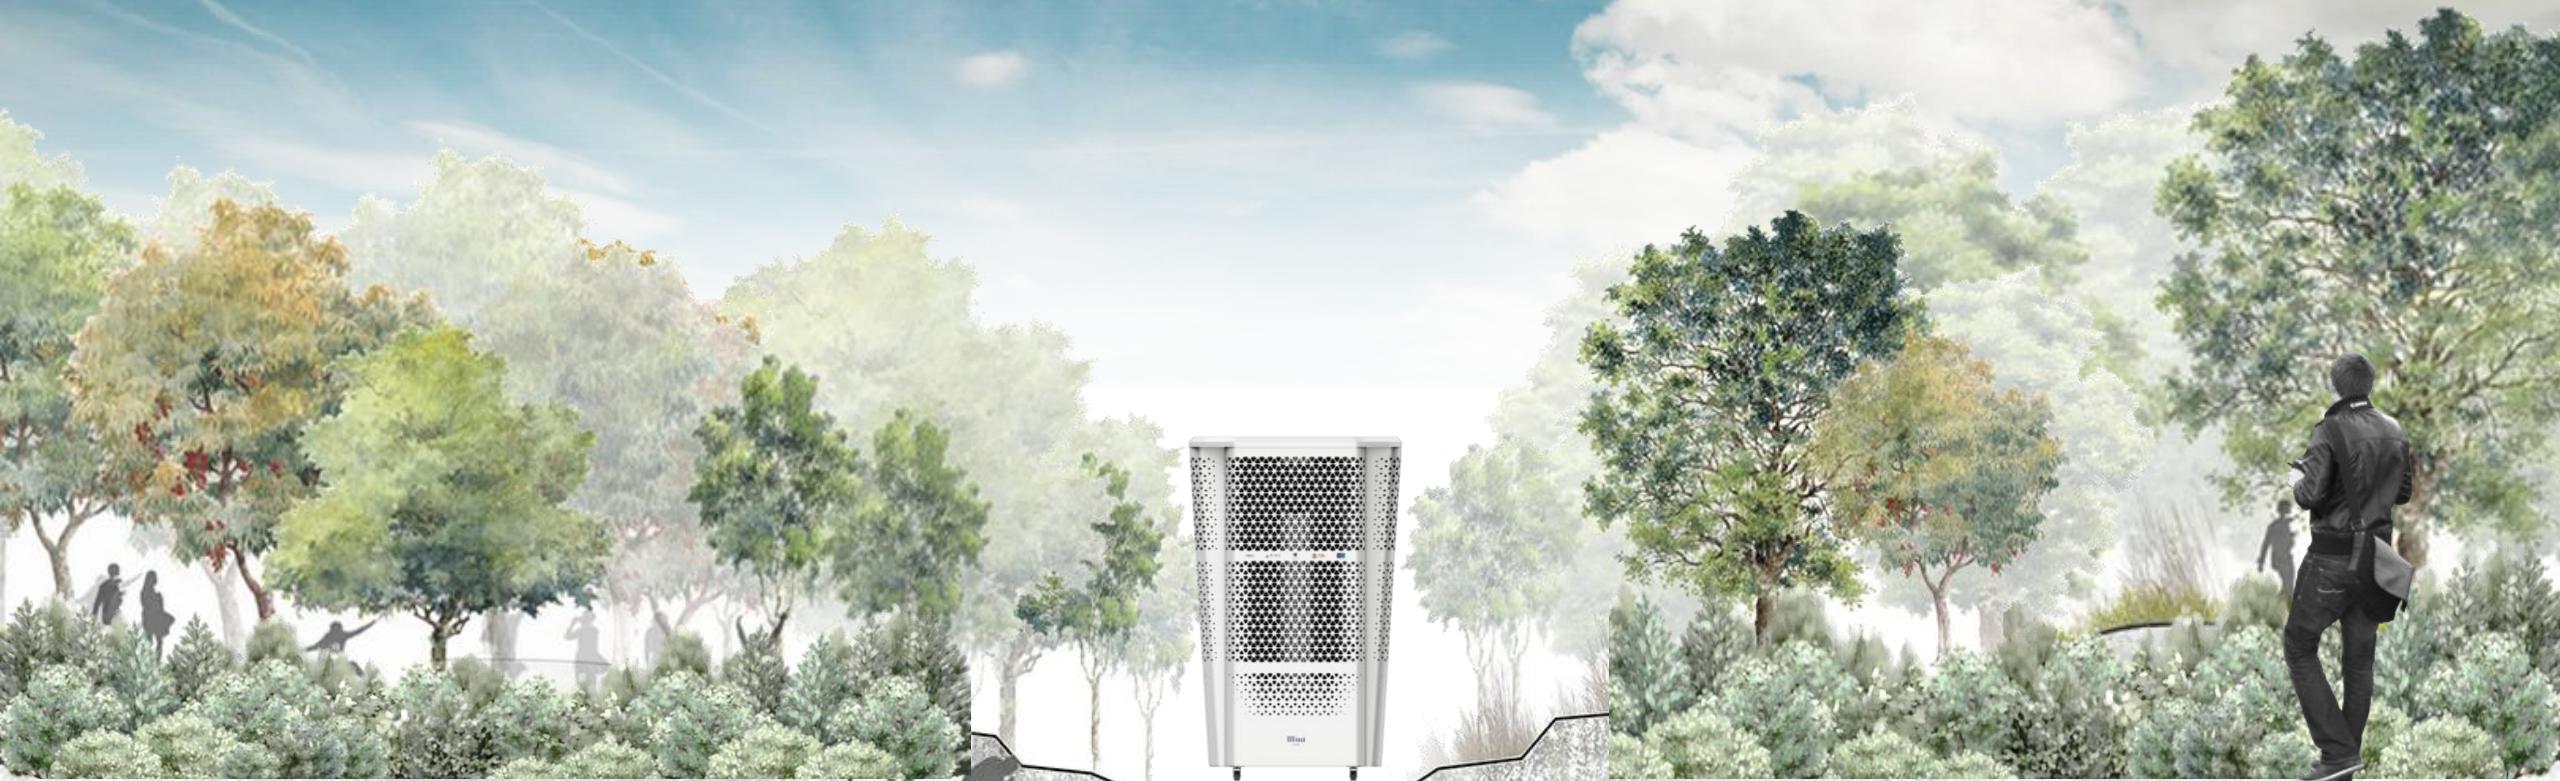

↓

จังหวัดที่เสียชีวิตจากมะเร็งปอดต่ำที่สุด 5 อันดับ	ค่า (%)
สุรินทร์	14.57
กรุงเทพฯ	13.05
ปัตตานี	9.67
นราธิวาส	9.19
ยะลา	8.21

# นวัตกรรมพอกอากาศชุมชน “ฟ้าใส”

TO CLAIM THE RIGHT TO HAVE GOOD AIR TO BREATHE  
TO EXTEND THE BOUNDARIES TO THINKING OUTSIDE THE BOX TO CREATE **A SAFE HAVENS.**

# PRODUCT SPECIFICATION

The process begins by drawing in polluted air from below using an exhaust fan. This air is then passed through dual layers of high-speed spray nozzles, each serving different purposes. These nozzles are part of a dust trap structure designed to increase the water's surface tension, effectively capturing particles as small as 0.3 microns. The purified air is then disinfected by the system, utilizing UVGI technology for thorough cleaning. It is released at breathing level, aided by a propeller to achieve the desired volume.

The hybrid power system is synchronized to reduce electricity usage during the day (The automatic variable speed depend on measurement sensor), while some of the water is recycled and sterilized using ozone technology and a water filtration system

## SPECIFICATION

Air capacity | 60,000 m<sup>3</sup>/h  
(4 outlet x

15,000 m<sup>3</sup>/h)  
Particle capture | 0.3 micron and above  
Wind force radius | ~ 5m.

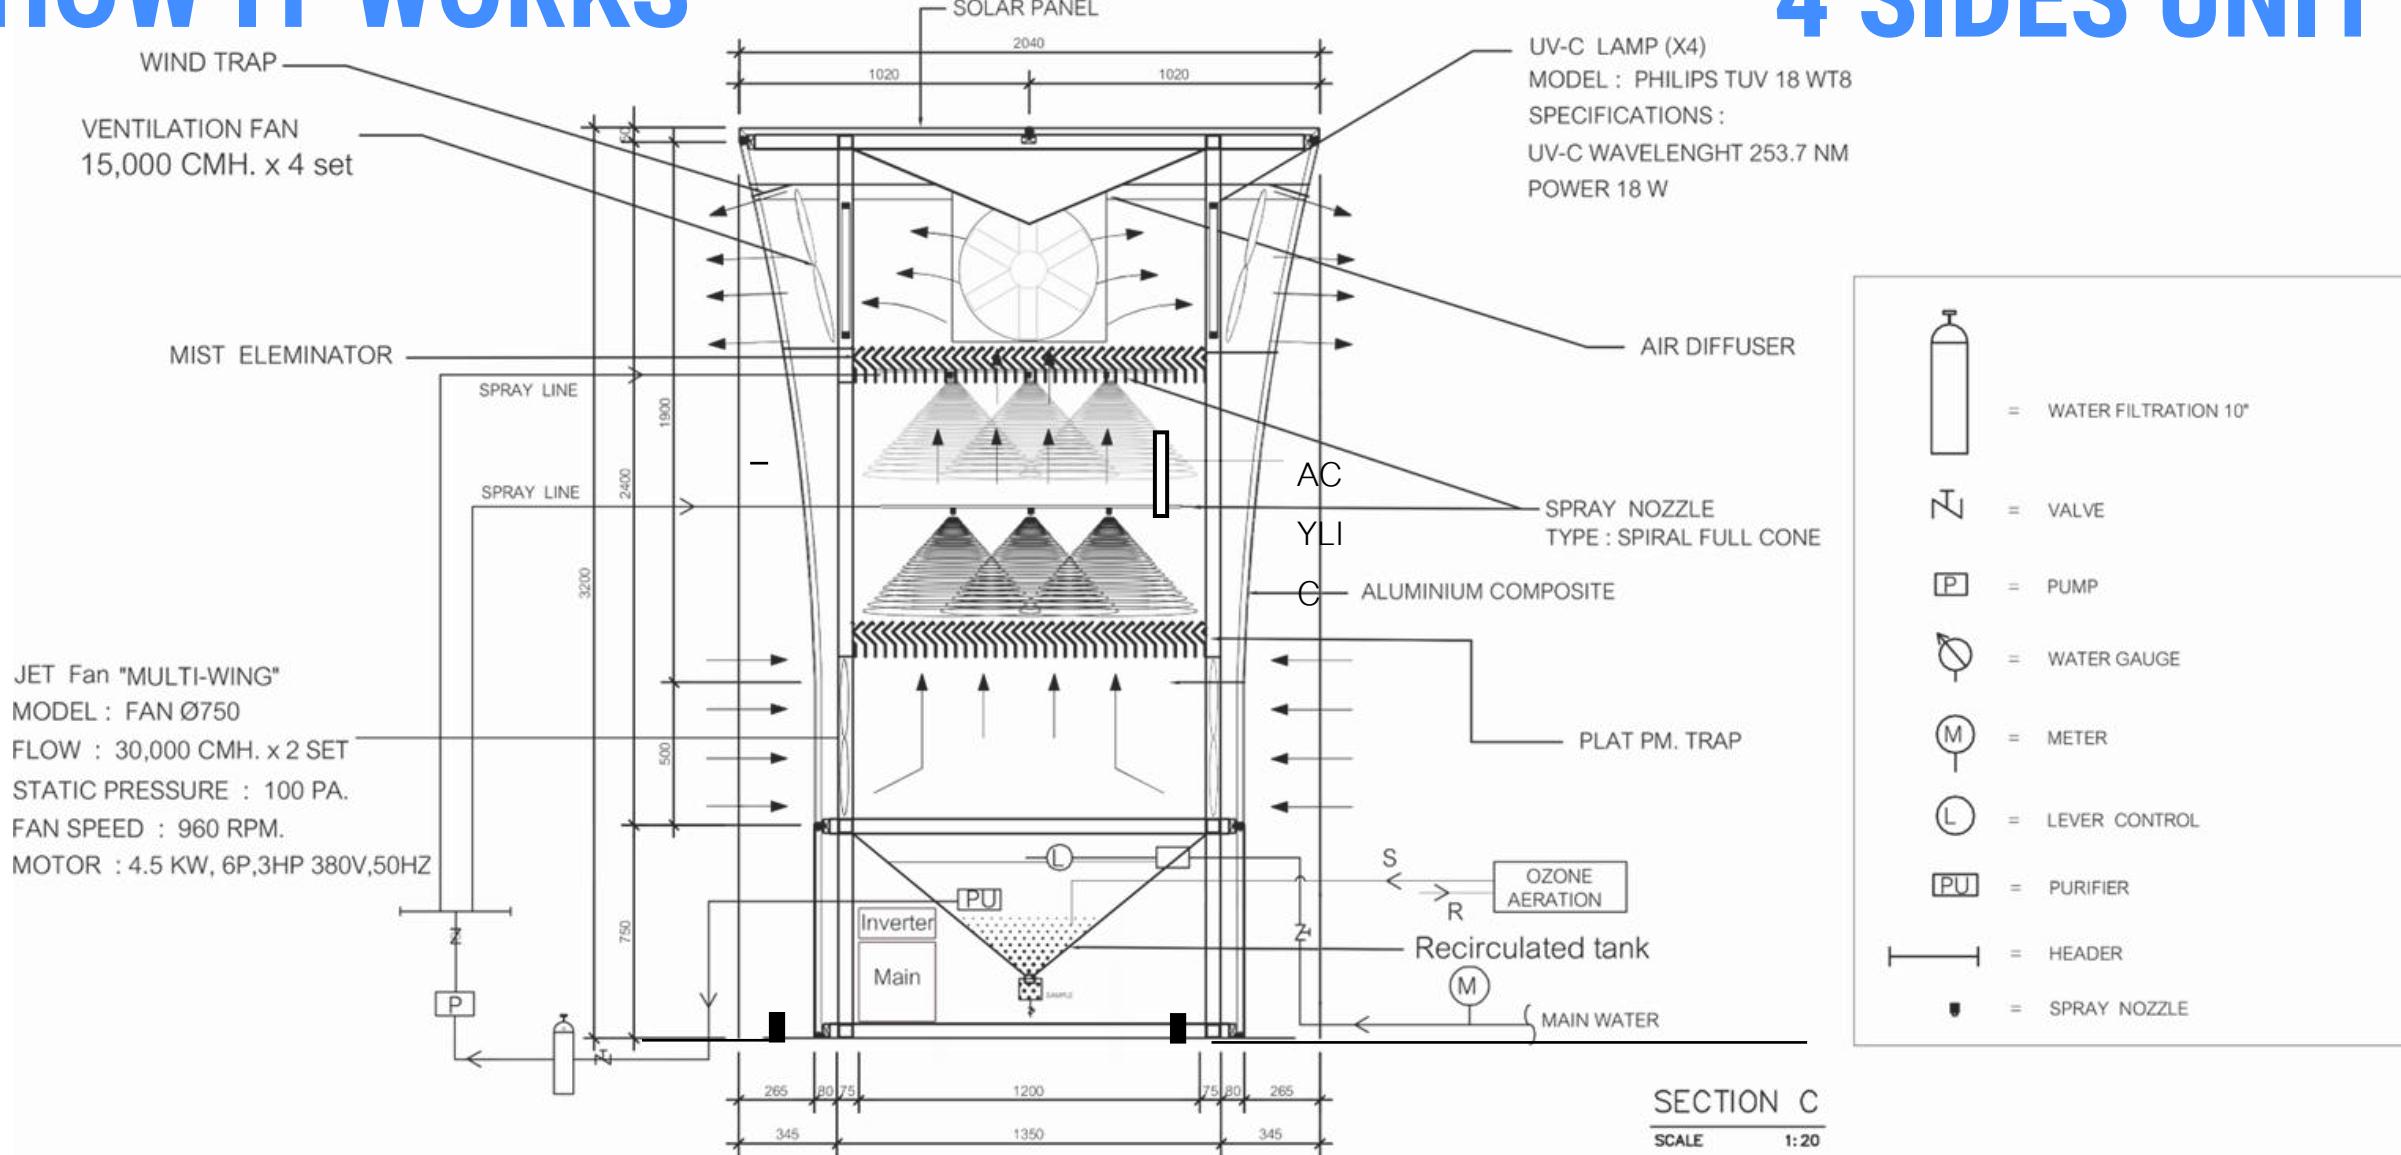

## TECHNICAL

Filter technology | Venturi scrubber  
Energy consumption | 6,000W-3,000W(max)  
Water circulated | 50 Liters /day  
Diameter | Base 1.35m, Top 2.04m  
Height | 3.25m

- L**       LEVEL CONTROL

# Product features

## **Max Capacity 60,000 CMH PM2.5 Purifier**

Advanced Air Purification Technology. The FAHSAI air purifier tower utilizes cutting-edge filtration systems capable of removing particulate matter (PM2.5, PM10).

This ensures a comprehensive purification of outdoor air, improving air quality significantly in public spaces, urban centres, and large private estates.

## **Venturi Scrubber 50 L/day Recirculated water**

The use of water in a Venturi scrubber effectively minimizes waste generation and enhances environmental sustainability.

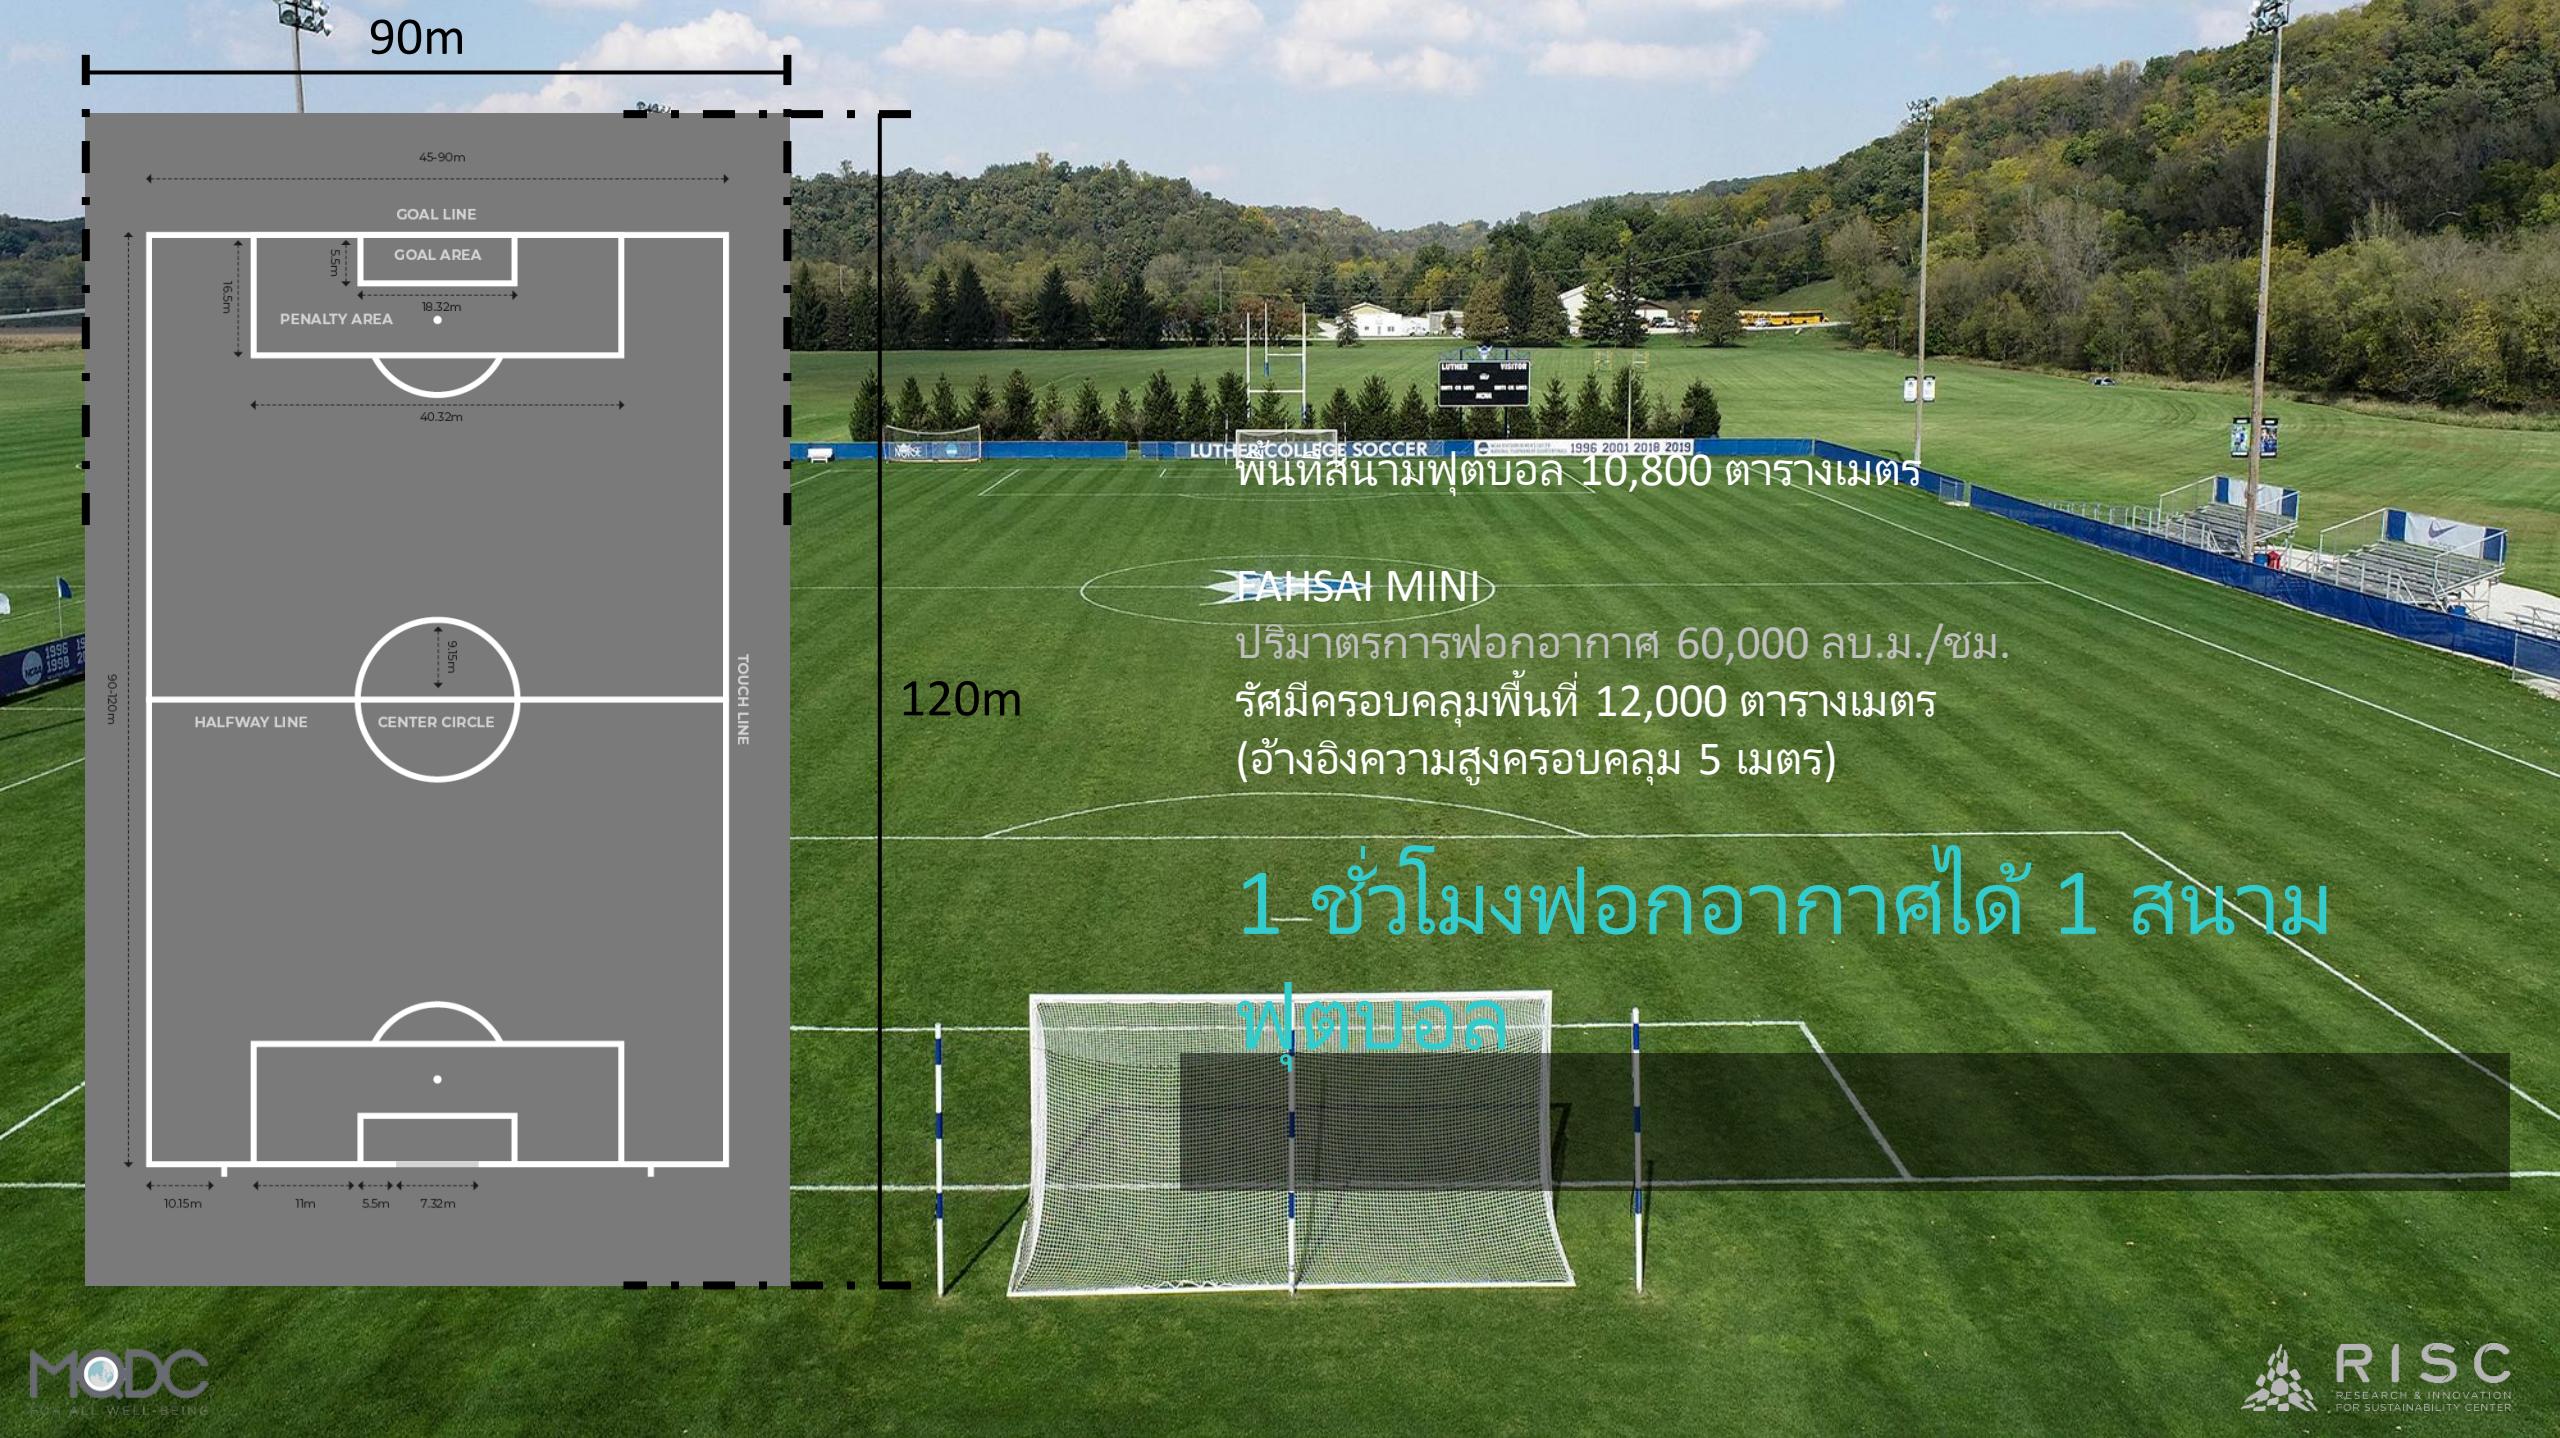

## **Continuous Operation ALL-DAY Performance**

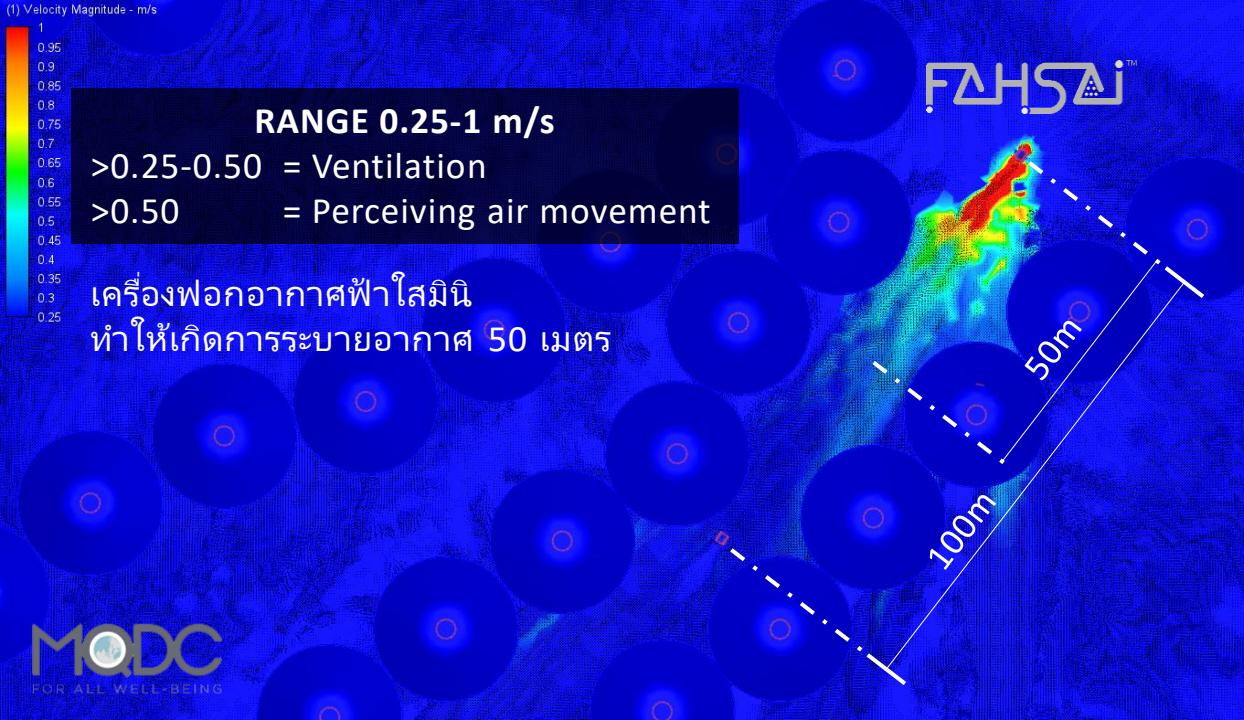

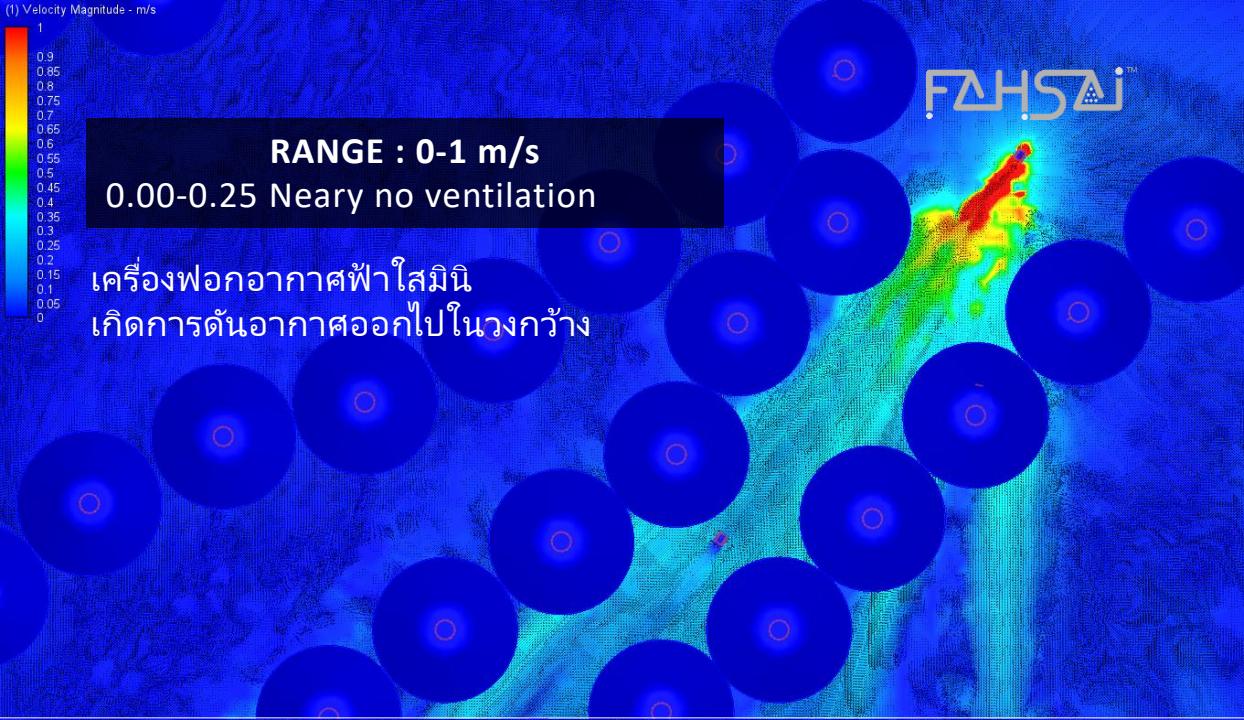

The FAHSAI air purifier tower integrates an energy-efficient design with advanced smart technology to enhance its functionality. Equipped with an air quality sensor, it continuously monitors PM2.5 levels in the surrounding environment. Based on real-time air quality data, the system automatically adjusts its operational speed, ensuring optimal purification efficiency.

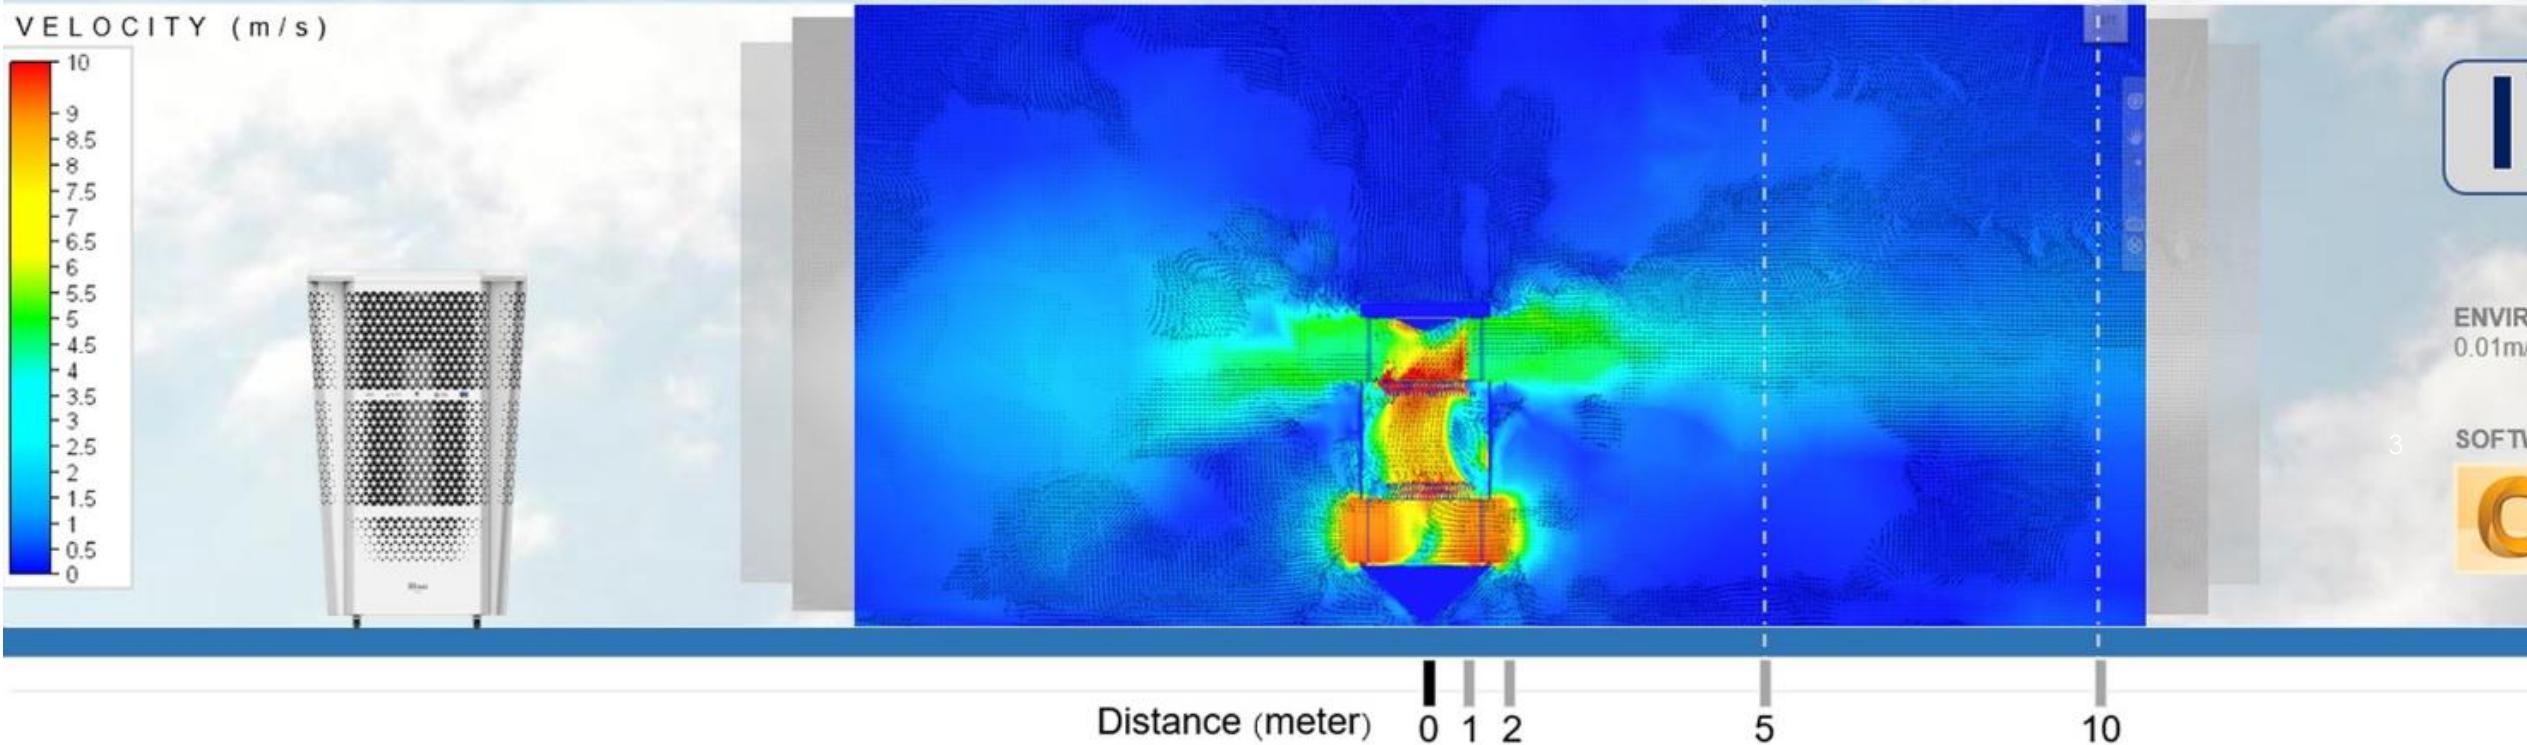

## **OZONE Water Treatment**

some of the water is recycled and sterilized using ozone technology and a water filtration system

## Using CFD Simulation for system design and performance prediction

Distance (meter) 0 1 2 5 10 20

## Laboratory Performance Evaluation

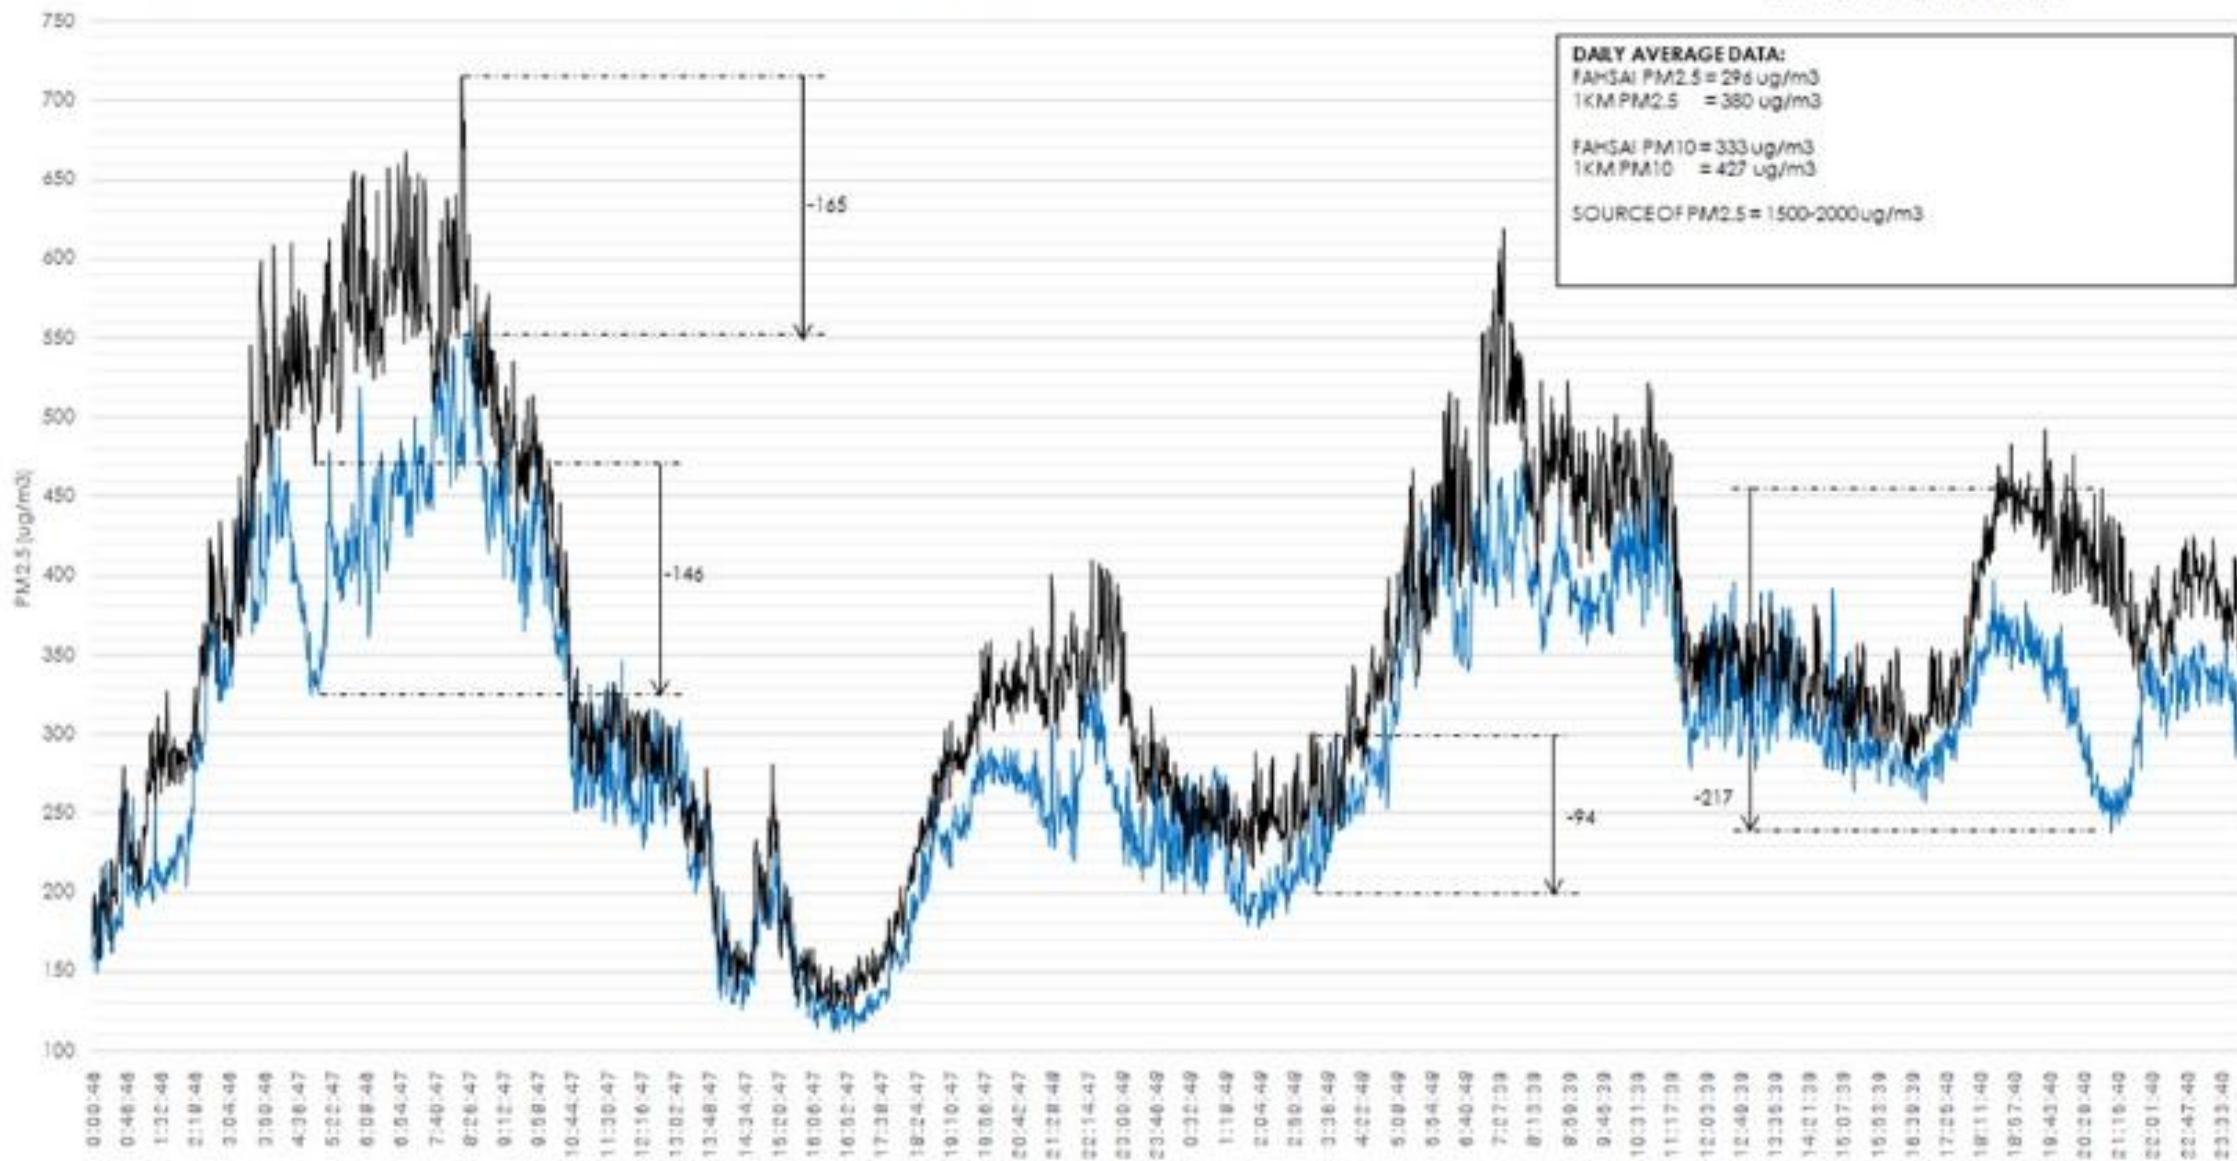

Run at 75% Total PM2.5 purified 906,000 ug/min (90.6 ug/m<sup>3</sup>/min)

Run at 100% Total PM2.5 purified **1,211,3259 ug/min (107.7 ug/m<sup>3</sup>/min)**

1-min data collected
